

# TECHSPEC® RefIX™ OBJECTIVES

#89-723 • 30.56mm WD • 10X/0.23NA  
DUV ENHANCED ALUMINUM

Reflective Objectives are commonly used in applications requiring superior image quality or focusing performance over a broad spectral range. The schwarzschild-style objective exhibits near-diffraction limited performance over the full reflecting range of the chosen coating. By eliminating the problems of chromatic aberration and material absorption associated with standard microscope objectives, these components are ideal for applications requiring high throughput and excellent resolution in the UV or IR, including FTIR spectroscopy, ellipsometry, photolithography, and semiconductor inspection.
