

TLK-G1350R - April 27, 2018

Item # TLK-G1350R was discontinued on April 27, 2018. For informational purposes, this is a copy of the website content at that time and is valid only for the stated product.

TUNABLE LASER KIT COMPONENTS

- Components for ECL Kits Offer Highly Customizable Solutions
- Alter Cavity to Support Various Wavelengths

TLK-G0750M
Littman
Grating Module

TLK-G1350R
Grating Module,
1310 nm Operation

TLK-352330-C
Mounted Aspheric
Collimating Lens

Z812
Motorized Actuator

OVERVIEW

This page includes products that are direct replacements of standard components in the Tunable Laser Kit and can be used to customize a tunable laser kit's performance. By using these components, customers can replace standard components and alter the laser's performance. The images and tables immediately below label the components in our standard Tunable Laser Kits.

Littman Tunable Laser Kits

Label	Description	Label	Description
A	Tuning Motor Mount	F	Collimating Lens
B	Gain Chip Mounting Plate	G	Littman Grating Platform
C	Half Butterfly Gain Chip	H	Littman Grating Module
D	Collimation Adjuster	I	Littman Mirror Module
E	Mode Hop Adjuster	J	Tuning Motor

- The values given in the highlighted columns were measured in the specified reference cavity. Different external cavities will produce different performance specifications.
- 10 dB point.
- Single-pass optical gain at center of gain curve.
- This item is no longer available for individual purchase.
- Refer to the FP chip reflectivity diagram below.
- Refer to the SAF chip reflectivity diagram below.

ASE Specifications					
Item #	Center Wavelength (Typ.)	3 dB Bandwidth (Typ.)	ASE Current	Operating Current (Typ.)	Operating Current (Max)
TFP780A	780 nm	30 nm	80 mA (Typ.)	140 mA	180 mA
SAF1171S	1050 nm	60 nm	150 mA (Max)	-	150 mA
SAF1175S	1220 nm	80 nm	200 mA (Typ.)	200 mA	-
SAF1174S	1320 nm	80 nm	600 mA (Typ.)	500 mA	800 mA
SAF1450S2	1450 nm	100 nm	500 mA (Max)	-	500 mA
SAF1550S2	1550 nm	80 nm	300 mA (Typ.)	300 mA	600 mA
SAF1550P2	1550 nm	80 nm	300 mA (Typ.)	300 mA	600 mA
SAF1900S	1930 nm	150 nm	400 mA (Typ.)	500 mA	800 mA

Note: The light polarization is vertical inside the Fabry-Perot Gain Chip, while the light polarization is horizontal inside the SAF Gain Chips.

*R₂ = 10% for all models in the SAF series except the SAF1900S, for which R₂ = 20%.

The Fabry-Perot (FP) laser diode has the two parallel ends of the semiconductor cleaved atomically flat to produce an oscillating cavity. Laser light is typically emitted through one of these highly reflective edges, using the semiconductor as the gain medium. FP lasers typically lase in a single longitudinal mode and exhibit temperature-dependent tunability over a small range. Since the end facets of the chip form the laser cavity, different longitudinal modes also appear in the emission, broadening the linewidth (100 - 1000 GHz). Given below are the typical TFP780A spectra and details on the packaged devices.

Item #	Center Wavelength	Power vs. Current	Power Spectrum
TFP780A	770 nm		

Fabry-Perot Gain Chip Drawing

Basic Littman Configuration

SAF Gain Chip Lasing Performance Using Littrow Tunable Laser Kit

The innovative design of an SAF gain chip is ideal for use in external cavity lasers because it virtually eliminates unwanted feedback from the intracavity facet of the gain chip. These devices offer superior performance in a wide variety of external cavity configurations. Given below are typical spectra and details on the packaged devices.

Item #	Center Wavelength	Power vs. Current	Power Spectrum
SAF1171S	1050 nm		
SAF1175S	1220 nm		
SAF1174S ^a	1320 nm		
SAF1450S2	1450 nm		
SAF1550S2	1550 nm		
SAF1550P2	1550 nm		
SAF1900S	1900 nm		

- Please note that the fluctuations in the power spectrum between 1350 and 1380 nm are associated with water vapor absorption.

Fiber-Coupled SAF Gain Chip Drawing

Basic Littrow Configuration

CAVITY CONFIGURATION

Lasers consist of an active gain element and optical feedback to

Cavity Design	Littrow	Littman-Metcalf

this gain element. The most common diode lasers are based on a Fabry-Perot design with a linear waveguide and reflective surfaces at both ends of the gain

High Output Power	x	
Wide Tuning Range	x	
Narrow Linewidth		x
Stationary 0 th Order Beam		x

chip to provide feedback. Some Fabry-Perot lasers are constructed for external feedback, but this is rare. Single angle facet (SAF) gain chips, on the other hand, have a curved waveguide with only one internally reflective endface and rely on external optical feedback to produce lasing.

Through the use of an external feedback mechanism, a user is able to tune a laser cavity to sustain a desired wavelength with minimal linewidth. This is highly desirable for many applications, particularly in metrology where precision is essential. Littrow and Littman-Metcalf configurations are the two most common ways to build an External Cavity Laser (ECL). Many other ECL configurations are based on these designs, but typically modify the cavity with additional optical components. Littrow cavities have minimal losses and thus intrinsically offer higher power, while Littman-Metcalf cavities produce a narrower linewidth.

A Littrow cavity provides feedback to the gain element through the use of a grating. One end of the gain element must allow light to exit, such as the design of an SAF. Light emitted from this end is first collimated. A grating then diffracts this collimated beam with the 1st order diffraction coupled back into the gain element, which allows it to support lasing. Wavelength tuning of the laser is possible by altering the angle of the grating relative to the cavity. 0th order diffraction from the grating will exit the laser's cavity at an angle dependent on the grating angle.

Littman-Metcalf configured ECLs use both a grating and a mirror for tuning. Similar to the Littrow configuration, light emitted from the uncoated end of the gain element must first be collimated. This beam is then diffracted by a grating. The 0th order diffraction reflects off of a mirror back on to the grating, where it is diffracted a second time before being coupled back into the gain element. Since light is diffracted twice, losses are higher (power loss), but the side mode suppression ratio (SMSR) is increased to produce a narrower linewidth laser. In this configuration the grating remains stationary, while the mirror is turned to tune the laser cavity's supported wavelength. Unlike with Littrow lasers, the direction of the 0th order free space beam remains stationary, which can be beneficial in some applications.

Many modifications to these cavities can be made to produce a higher polarization extinction ratio (PER) or to improve the SMSR. We always seek to tailor our products to our customers' applications. Please contact Tech Support and let us know what accessories would benefit your application.

Tunable Laser Gain Chips with TEC

- ▶ Gain Chips Mounted for Easy Integration into External Cavity Lasers
- ▶ Half-Butterfly Assembly with Thermoelectric Cooler
- ▶ AR Coating Eliminates Unwanted Reflections, Increasing Laser Stability, Output Power, and Spectral Quality
- ▶ FP Chip Designed for Use in a Free-Space Littman Cavity
- ▶ SAF Chips Feature 1.0 m Long (Min), SM or PM Tight Jacket Pigtail with FC/APC Connector

Click the  icon below for more detailed performance specifications. The SAF gain chips can also be coupled to PM fiber. Please contact Tech Support for more information on customization and quotes.

Note: The TFP780A does not include a fiber-coupled output.

Gain Chip Item #	Compatible Laser Kits	Typical Center Wavelength*
TFP780A	TLK-L780M	770 nm
SAF1171S	TLK-L1050M	1050 nm

Mounting Plates for AR-Coated Laser Diodes in TO Cans

- ▶ Mounts Ø5.6 mm or Ø9 mm Diodes
- ▶ Integrated TEC and Thermistor
- ▶ Four-Pin Socket Accepts A, B, C, D, or E Pin Configurations (See Right)

These mounting plates integrate TO-packaged laser diodes into Thorlabs' Tunable Laser Kits. They are drop-in replacements for the standard Half-Butterfly Mounting Plates. As TO-packaged diodes are readily available with various center wavelengths, this represents an economical solution for building a customized tunable laser that operates at wavelengths for which a half-butterfly gain chip is not available.

The mounting plates incorporate a 10 kΩ thermistor into the diode bracket for accurate temperature readings, and a 1.5 A TEC element is placed in contact with this bracket via thermal grease, providing excellent heat transfer. If greater thermal control is required, the TEC element may be replaced with a larger TEC by the user.

These mounting plates ship ready to accommodate either a Ø5.6 mm or a Ø9 mm diode. Regardless of which model is ordered, a supplementary bracket is included to accept the other diode package size. When changing between brackets, ensure that the thermistor is disconnected from the wiring harness and re-apply thermal grease to the TEC element before re-attaching a laser diode bracket.

Installation Notes

To insert a laser diode in to the mounting plate, first remove the retaining ring from the bracket with an SPW301 spanner wrench. Next, insert a laser diode. Now thread the retaining ring behind the diode to secure it in the mount. Attach the laser diode socket to the diode and route the wires to the proper connection on the mounting plate.

Part Number	Description	Price	Availability
TLK-PM5	Customer Inspired! Tunable Laser Kit Mounting Plate for Ø5.6 mm TO-Packaged Laser Diodes	\$707.88	Today
TLK-PM9	Customer Inspired! Tunable Laser Kit Mounting Plate for Ø9 mm TO-Packaged Laser Diodes	\$707.88	Today

Tunable Laser Kit Base Module

- ▶ Base Plate of Tunable Laser Kit
- ▶ Includes Controller Interface with Laser Polarity Switches

The TLK-BM base module is the common mounting plate on which all other tunable laser components are mounted, and can be purchased here as a replacement for the base included in the Tunable Laser Kits. The TLK-BM includes a controller interface with polarity switches to support different AR-coated and laser diodes.

Part Number	Description	Price	Availability
TLK-BM	Customer Inspired! Tunable Laser Kit Base Module, Includes LD/TEC Controller Interface	\$1,251.54	3-5 Days

Littrow Grating Modules

- ▶ Grating Modules for Operation at 980, 1310, or 1950 nm
- ▶ Includes Pivot Bracket, Arm, and Grating

Thorlabs offers five holographic reflection gratings featuring 900, 1350, or 1800 grooves/mm for use with TLK Series Littrow Tunable Laser Kits. The gratings are premounted on a pivot arm for easy installation into existing Tunable Laser Kits.

Littrow Grating Item #	Compatible Littrow Kit	Optimal Center Wavelength
TLK-G1800R	N/A	980 nm
TLK-G1350R*	TLK-L1300R	1310 nm
TLK-G0900R	TLK-L1950R	1950 nm

*Position of grating on arm differs between both 1350 grooves/mm products.

Part Number	Description	Price	Availability
TLK-G1800R	Littrow Grating Module for Littrow Tunable Laser Kits, 1800 g/mm, 980 nm Operation	\$1,763.58	Today
TLK-G1350R	Littrow Grating Module for Littrow Tunable Laser Kits, 1350 g/mm, 1310 nm Operation	\$1,763.58	Lead Time
TLK-G0900R	Littrow Grating Module for Littrow Tunable Laser Kits, 900 g/mm, 1950 nm Operation	\$1,679.94	Today

Ä

Littman Grating Modules

- ▶ Grating Modules for Operation Centered at 770, 1050, or 1550 nm
- ▶ Includes Grating and Mount

Littman Grating Item #	Compatible Littman Kit	Optimal Center Wavelength
TLK-G1150M	TLK-L1050M	1050 nm
TLK-G0750M	TLK-L1550M	1550 nm

Thorlabs offers five holographic reflection gratings featuring 750 or 1150 grooves/mm for use at 1550 or 1050 nm, respectively. The gratings, 17.0 mm x 7.3 mm, are premounted for easy installation into existing Tunable Laser Kits.

Part Number	Description	Price	Availability
TLK-G1150M	Customer Inspired! Littman Grating Module for Littman Tunable Laser Kits, 1150 g/mm	\$504.90	3-5 Days
TLK-G0750M	Littman Grating Module for Littman Tunable Laser Kits, 750 g/mm	\$608.94	3-5 Days

Ä

Tuning Actuator Mounts

- ▶ Mirror / Grating Actuator Motor Mount
- ▶ Radial Arm Retainer Spring
- ▶ TLK-MM2: Designed for Ø9.5 mm (Ø3/8") Barrel Actuators

The TLK-MM2 Tuning Motor Mount has a clamp for Ø9.5 mm (Ø3/8") barrel actuators. This allows the integration of actuators such as our PE4 manual and piezo drive or the Mitutoyo 148-142 high-resolution micrometer.

Part Number	Description	Price	Availability
TLK-MM2	Ø9.5 mm (3/8") Barrel Tuning Motor Mount for Tunable Laser Kits	\$234.60	3-5 Days

Ä

DC Motor Tuning Actuator

- ▶ Direct Replacement for TLK Tuning DC Servo Motor
- ▶ 12 mm Travel
- ▶ 29 nm Theoretical Resolution
- ▶ 3 mm/s Max Velocity

The Z812 is the standard DC servo motor used in Thorlabs' Tunable Laser Kits. Its 1/4"-80 threaded barrel mounts to the former TLK-MM1 Tuning Motor Mount. We recommend using the KDC101 Kinesis[®] Controller for this actuator.

Part Number	Description	Price	Availability
Z812	12 mm Motorized Actuator, 1/4"-80 Thread (0.5 m Cable)	\$628.32	Today

Ä

Half-Wave Plate

- ▶ Zero-Order, Half-Wave Plate
- ▶ 780 nm Center Wavelength

- ▶ Mounts to Collimation Lens, Featured Below
- ▶ Optic Axis Oriented at $45^\circ \pm 2^\circ$ with Respect to the Mount (See Drawing to Right)
- ▶ Custom Wave Plates Available, Contact Technical Support for Details

The TLK-WPH780 is a zero-order, half-wave plate for use with tunable laser kits. This mounted wave plate is most useful when working with short wavelength devices in TO can packaging where the user can optimize both the beam axis orientation (to illuminate the maximum number of grating lines) and the polarization of the light incident on the external cavity grating.

Part Number	Description	Price	Availability
TLK-WPH780	780 nm Mounted Half-Wave Plate	\$343.74	Today

Mounted Aspheric Collimating Lens

- ▶ Mounted Aspheric Lens
- ▶ 1050 - 1620 nm Coating

Thorlabs' offers a premounted aspheric lens for easy integration and alignment into our Tunable Laser Kits. The TLK-352330-C Collimating Lens incorporates a $\varnothing 5.00$ mm, $f = 3.1$ mm, $NA = 0.68$ Geltech Aspheric Lens with AR coating for 1050 - 1620 nm (Part # 352330-C).

Collimating Lens Item #	Compatible Laser Kit	Center Wavelength
TLK-352330-C	TLK-L1300M	1310 nm
TLK-352330-C	TLK-L1550M	1550 nm

Part Number	Description	Price	Availability
TLK-352330-C	Tunable Laser Kit Collimating Lens, AR Coating: 1050-1620 nm	\$190.74	Today
